Standards

DYNAPAVE

A new generation of Dynamic Testing Systems
for Road Paving Materials

Suitable to measure:
- STIFFNESS
- FATIGUE STRENGTH
- PERMANENT
DEFORMATION

Predict Asphalt Pavement
long term performance

Three Models:
15 - 30 - 130 kN capacity

Dynamic Testing Systems for Road Paving Materials

Established in 1968, CONTROLS has quickly grown to be a leader in the production of testing equipment for the Construction Industry.

Our mission is:

"To become our Customer's best partner, to deliver unique expertise, to provide outstanding service and specialized skills."

Our efforts are aimed:

"To comply with the current needs and to anticipate the future requirements."

**All our machines are developed with high attention to:
"Mechanical and Electronical combined with Ergonomics and latest technologies User-friendly concepts".**

CONTROLS: a long experience in advanced testing systems

From the beginning CONTROLS develop advanced equipment and this long experience was further increased in 2004 by incorporating **WYKEHAM FARRANCE**, a well-known English company manufacturing **Geotechnical Testing Systems**, established in 1941. This synergy has focused in the research, design and manufacture of new advanced testing systems such as the Dynamic testing Machines.

Since 1941
PIONEERS IN ADVANCED SOIL TESTING

The evolution of Road material testing

Empirical testing of asphalt adopted until now, is no longer sufficient to support the leap in quality of paving over time due to the continual increase of road traffic in terms of frequency, weight, and load time.

The development of the testing techniques based on the Asphalt Pavement Performances, started in 1987 by the Strategic Highway Research Program (SHRP) in USA.

After 5 years of research SHRP released the SUPERPAVE™ (Superior PERforming asphalt PAVEments) introducing new testing systems and specifications for road materials. This activity led to a number of Standards as, for example:

- **AASHTO TP8 Flexural Fatigue and AASHTO TP9 Indirect Tensile Test.**

In parallel, in Europe, the CEN committee developed several Standards concerning the Dynamic tests as an example:

- **EN 12697 Test methods for hot mix asphalt: Part 24 Resistance to Fatigue, Part 25 Cyclic Compression test, Part 26 Stiffness.**

Our R&D Department has promptly acknowledged from the beginning in 1987 the new requirements. Vast range of testing apparatus for asphalt and bituminous mixtures has been considerably increased with the adoption of the Superpave™ testing methods and subsequent ASTM, AASHTO, EN Standards and a key role is played by the dynamic technologies.

DYNAPAVE Dynamic Testing Systems

Three models are available featuring different performances and applications:

- SERVO-PNEUMATIC model **78-B7015** 15 kN capacity
- SERVO-HYDRAULIC model **78-B7030** 30 kN capacity
- SERVO-HYDRAULIC model **78-B7130** 130 kN capacity

Servo-pneumatic model outstands for the **PERFORMANCE/PRICE RATIO**. It is suitable for loads up to 15 kN and frequencies up to 30 Hz.

Servo-hydraulic models excel at **HIGHER FORCES - up to 30 and 130 kN - and HIGHER FREQUENCIES up to 70 Hz.**

78-B7015 - 15 kN capacity

78-B7030 - 30 kN capacity

78-B7130 - 130 kN capacity

- AASHTO TP 46, AASHTO T294, AASHTO T307

4 POINT BENDING

STANDARDS

- EN 12697-24 Annex D, EN 12697-26 Annex B
- AASHTO TP8, AASHTO T321

GENERAL DESCRIPTION

This system performs load or displacement controlled test with programmable waveshape over a large range of frequencies, simulating the traffic effect. The user-friendly interface allows the operator to monitor the test performance and to evaluate results. The system has to be completed by the accessories conforming to the test to be performed. See page 10, 11 and 12. The temperature controlled cabinet model 78-B7192 is also offered separately.

MAIN FEATURES

- Servo-pneumatic dynamic system with outstanding performance-price value
- Easy to use software driving the operator through the test
- Software language fully customizable
- High stiffness testing frame
- Fatigue rated servo-pneumatic actuator with internal displacement transducer
- Fast and easy crosshead positioning
- Large testing chamber
- Complete range of accessories and softwares conforming EN, ASTM and AASHTO Standards

78-B7015 inside the 78-B7192 temperature controlled cabinet and accessory

ORDERING INFORMATION

- **78-B7015** Servo-pneumatic dynamic testing system
15 kN cap., including testing frame, control unit, air reservoir and load cell. 110-230V, 50-60 Hz, 1 ph.

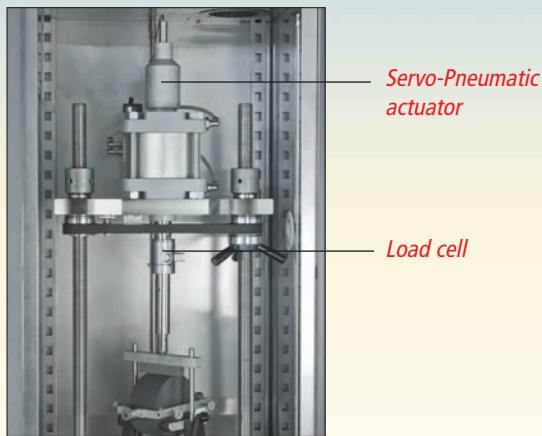

N O T E : This system require a suitable air compressor. The following model is ideal for this application.

- **86-D2015/A** Air compressor, 8 bar continuous working pressure, 10 bar max. pressure, 5.5 kW, 200 l cap. ait tank. 400 V, 50 Hz, 3 ph.

TECHNICAL SPECIFICATIONS

FRAME

- High stiffness steel frame, 15 kN cap., vertical daylight 650 mm, distance between columns 339 mm
- Double effect servo-pneumatic actuator, 30 mm stroke
- 30 mm displacement transducer inbuilt in the actuator
- Complete with pneumatic reservoir, 5 l cap., with pressure gauge, filter, connections, hoses
- Load cell ± 25 kN cap.
- Max frequency 30 Hz

CONTROL SYSTEM - CDC Compact Dynamic Controller

- Inputs: 12 analog input channels, 8 digital inputs
- Outputs: No. 2 analog output, 8 digital outputs, dedicated solenoid valve for air supply

CONTROL AND FEEDBACK

- 10 kHz control loop with 2.5 kHz data acquisition rate for all channels
- Two servo-controlled axes (vertical actuator and confining pressure)
- Vertical actuator can be controlled by different feedback signals (load cell, internal displacement transducer, external displacement transducer)
- Confining pressure controlled by pressure transducer
- Analog inputs can be calibrated with multi-point linearization
- User defined calibration ranges via software
- 100 Mb/s Ethernet

PC SOFTWARE

- All-in-one monitoring and control software
- User-friendly calibration management
- Wide range of modules for asphalt, unbound materials and user defined tests
- Sine, Haversine, Square and user defined programmable waveshapes
- Real time channels readout
- Programmable test procedures
- Programmable "end of the test" function

NOTE:

PC and printer
not included

DIMENSIONS AND WEIGHT

- Frame (wxhxh): 480x300x1200 mm, 110 kg approx.
- Control unit (wxhxh): 420x270x150 mm, 12 kg approx.

TEMPERATURE CONTROLLED CABINET

■ 78-B7192

Temperature controlled cabinet -10 to +60°C - 230 V, 50-60 Hz, 1 ph.

■ 78-B7192/Z

Temperature controlled cabinet -10 to +60°C - 110 V, 60 Hz, 1 ph.

This unit is required to perform all tests listed above.

GENERAL SPECIFICATION

- Temperature range: -10 to +60°C, resolution 0.1°C
- Stainless steel AISI 304, 18/10 internal and external frame
- Three glass door
- Forced ventilation
- Closed loop PID temperature controller
- Cooling unit complete with defrost system
- Internal lightning
- Power: 1800 W
- Ex. dimensions: 700x700x2030 mm
- Weight approx.: 140 kg

4-POINT BENDING

STANDARDS

- EN 12697-24 Annex D, EN 12697-26 Annex B
- AASHTO TP8, AASHTO T321

78-B7181

Beam Fatigue module

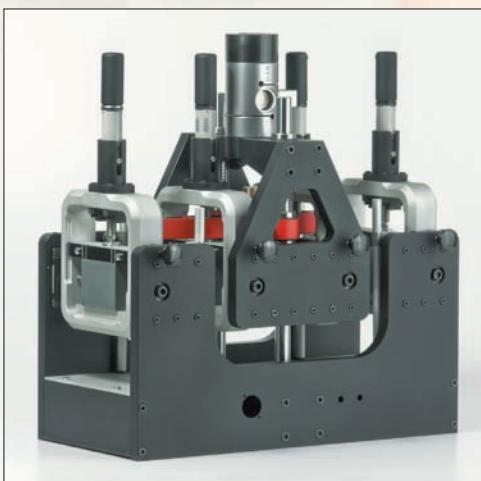

GENERAL DESCRIPTION

The beam cradle has been designed to test an asphalt beam specimen under 4-point bending conforming to Standards. The specimen is positioned and clamped using pneumatically operated clamps.

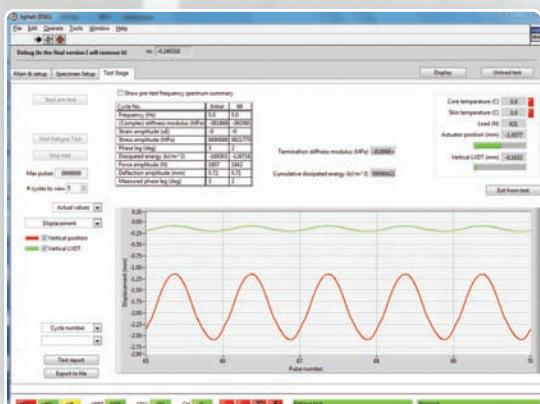

The module includes:

- Test software
- Cradle assembly and clamps for 50.8x63.5x400 to 70x70x400 mm specimens
- One LVDT displacement transducer
- ➲ Overall dimensions: 580x250x530 mm (hxdwx)
- ➲ Weight: 28 kg approx.

78-B7171 PVC Dummy beam

78-B7181

Example of 4-point bending fatigue test.

2-POINT BENDING

STANDARDS

- EN 12697-24 Annex A, EN 12697-26 Annex A

78-B7140

2-point bending accessory suitable for use with 78-B7030 servo-hydraulic machine only

GENERAL DESCRIPTION

The test set basically consists of an L-shaped frame mounted on the UTM unit. A trapezoidal asphalt specimen base is rigidly connected to the UTM base, and its top is bent by the UTM actuator. The asphalt specimen is loaded with sinusoidal displacement controlled waveshape. Load and displacement are recorded and the material stiffness is calculated. If test is performed until the specimen fails (typically material stiffness decreases up to 50%), fatigue properties of asphalt are calculated.

78-B7141

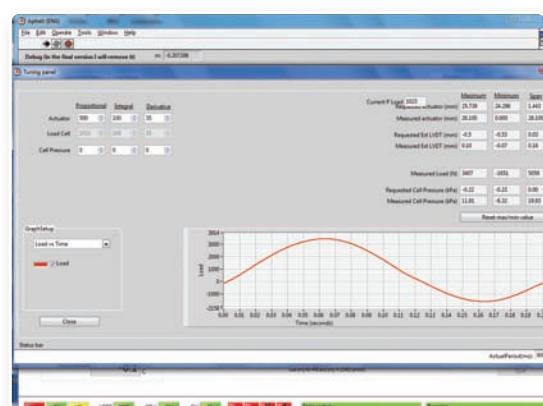

Set including one base plate and one top plate to be glued to the trapezoidal specimen to be used with 78-B7140

78-B7142

Aluminium calibration beam, to perform the calibration on 78-B7140 as required by EN 12697 procedure

78-B7140

Example of 2-point bending fatigue test.

TRIAXIAL TEST AND UNBOUND RESILIENT MODULUS TEST

STANDARDS

- EN 12697-25 Method B, EN 13286-7
- AASHTO TP 46, AASHTO T294, AASHTO T307

GENERAL DESCRIPTION

The triaxial test set can be used both for asphalt samples to EN 12697-25 Method B and for unbound materials to AASHTO TP46 and AASHTO T307. The triaxial cell can house specimens 100 mm dia. x 50 to 100 mm height (asphalt samples) and 100mm dia. x 200 mm height (unbound materials).

■ 78-B7160

Standard triaxial cell for 100 mm dia. specimens

Accessories for 78-B7160 triaxial cell

- ▶ **78-B7152** Pneumatic reservoir assembly with servo-valve (for use with servohydraulic machines only)
- ▶ **78-B7152/1** Confining cell pressure reservoir upgrade kit (for use with servopneumatic machines only)
- ▶ **78-B7153** 600 kPa pressure transducer
- ▶ **78-B7114** Two 10 mm LVDTs transducers
- ▶ **78-B7154** External axial LVDT mounting kit

78-B7160

Example of unbound resilient modulus test.

DYNAMIC MODULUS (AMPT, Asphalt Mixture Performance Test - formerly SPT)

STANDARDS

- AASHTO TP62, AASHTO TP79
- NCHRP 9-19 / 9-29

GENERAL DESCRIPTION

The Dynapave range testers can be used to perform the Dynamic Modulus test, with a 100 mm dia x 150 mm high sample, cored from a 150 mm dia. gyratory compacted specimen. The sample is fit with three LVDT transducers, applied at 120° one to the other, by the following accessories.

- ▶ **78-B7175** LVDT Gauge point fixing jig
- ▶ **78-B7176** Proving ring assembly
- ▶ **78-B7177** On-specimen LVDT mounting clamps, set of 6
- ▶ **78-B7178** On-specimen LVDT (1 mm), set of 3
- ▶ **78-B7179** Gauge points, set of 24

The 78-B7175 unit is used to position the 3 LVDT sensors on the specimen before testing.

Dynamic Testing Systems for Road Paving Materials

DYNAPAVE**78-B7210**

Stand Alone Beam Fatigue Dynamic Apparatus

STANDARDS

- EN 12697-26 Annex B, EN 12697-24 Annex D,
AASTHO TP8, T321

GENERAL DESCRIPTION

This apparatus has been designed to perform independently the 4-Point Beam Fatigue test.

It comprises a cradle with vertical clamping and a digital servo-controlled pneumatic actuator built into the base. The beam cradle has been designed to test an asphalt beam specimen under 4-points bending conforming to Standard. Two sets of pads are provided for the clamps to accommodate specimen from 50 mm to 70 mm in width. Servo-motor driven recirculating ball screws are used to clamp the specimen vertically. The motors are operated continuously during the test to take up the slack resulting from permanent deformation of the specimen at the clamping surfaces. The clamping force is controlled by regulating the motor current. The apparatus is supplied complete with testing software.

NOTE: PC and printer not included.

Specifications	
Size (hxdxw)	600x250x535 mm approx.
Weight	32 kg approx.
Load capacity	4.5 kN
Actuator stroke	10 mm
On specimen displacement transducer span	1 mm
Loading frequency	up to 30 Hz
Beam dimensions	63.5x50x400 mm nominal
Air supply	clean dry air at 800-900 kPa; 5 liters/s

78-B7181 PVC Dummy beam

NOTE: This system requires a suitable air compressor. The following model is ideal for this application.

86-D2015/A Air compressor, 8 bar continuous working pressure, 10 bar max. pressure, 5.5 kw, 200 l cap. ait tank. 400 V, 50 Hz, 3 ph.

Research
version
76-B0251

MAIN FEATURES

- Pneumatically operated vertical pressure
- High productivity and accuracy
- Compact and lightweight
- Certified to EN and AASHTO
- Full safety and ergonomics
- Integrated electro-mechanical extruder (GYROCOMP Series only)
- Test data on hard disk (ASCII files)
- Research version includes measurement of the shear resistance of material during compaction. Results displayed in real time
- Easy to use and to maintain
- Windows based software for result processing
- Calibrated by exclusive ILS device

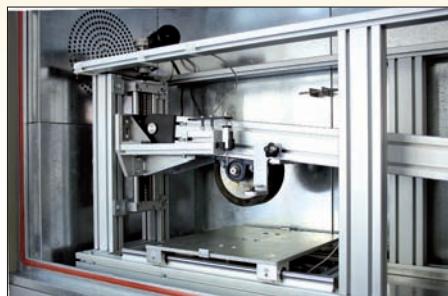

DYNA TRACK - Wheel Tracking Apparatus

STANDARDS

EN 12697-22

DYNA TRACK 77-B3502

77-B3502 Detail of
the loaded wheel
mechanism

MAIN FEATURES

- Automatic test control by advanced Data acquisition and processing system
- Large permanent memory to store test data and results
- RS 232 ports for connection to PC and printer
- Large graphic display 240x128 pixel
- Real time display of number of cycles, rut depth and temperature
- Adjustable cycle frequency
- Double temperature measurement: inside the specimen and in the cabinet
- Auxiliary motor to lower and lift the wheel loading assembly
- Testing software included for procedures EN A and B, and custom defined

DYNA COMP - Pneumatic Roller Compactor

STANDARDS
EN 12697-33

DYNA COMP 77-B3602

MAIN FEATURES

- Pneumatically powered
- Easy to maintain
- Safety enclosure
- Slabs 300x400 mm, 25 to 100 mm thick
- Compacts to target density
- Moulds easy to install and remove

BITUMAX - Asphalt Binder Analyser

STANDARDS
EN 12697-39, AASHTO TP53, ASTM D6307 and BS (DD)
American National
Centre for Asphalt
Technology (NCAT)

BITUMAX 75-B0008

MAIN FEATURES

- Completely automatic test cycle with simultaneous display of all the test parameters
- High efficiency heating system with additional afterburner for complete combustion of exhaust fumes, conforming to CE prescriptions
- PID closed loop temperature control
- Internal database, up to 100 tests. Each test can be displayed and printed, or downloaded to a PC
- Windows XP® compatible software to display weight/time curve, complete with database and certificate printout included

BITUMIX - Automatic Laboratory Mixer

STANDARDS
EN 12697-35

MAIN FEATURES

- Ideal to prepare laboratory samples
- Mixing capacity: 30 l
- Mixing speed adjustable from 5 to 35 rpm
- Mixing temperature adjustable up to 250°C
- Stainless steel (AISI 304) mixing container
- Temperature control by PT 100 probe
- Digital temperature display
- Easy unloading by motorized tilting system of the container

76-B0077/B Unloading position

WHY CONTROLS ?

SERVICE - Everywhere in the World

Head Office, Branches and more than 100 Dealers worldwide offer superior pre and after sales service.

KNOW-HOW - Fully owned by CONTROLS

Our Research centre and team of Qualified Engineers, following the marketing department indications, design innovative products compliant with the new Standards fully satisfying our clients' needs.

TECHNICAL SUPPORT - A value for the client

The expertise of our Product Managers and Customer Care is available to support our clients. Intensive professional training courses and technical seminars are organized to introduce new testing methodologies.

The screenshot shows a web-based login interface for Wykeham Farrance. On the left, there's a photograph of a female scientist in a white lab coat holding a clipboard. To her left, the text "Technical support" is displayed above a placeholder text block: "Lorem ipsum dolor sit amet, consectetur adipisciing elit". Below this is a form field with "Username" and a masked password field. At the bottom of the form are "LOGIN" and "Forgot your password?" buttons. To the right of the form is a large, circular "VISIT OUR WEB-SITE!" button with a red border and a yellow dotted outline. Inside the circle, the text "VISIT OUR WEB-SITE!" is written in bold, uppercase letters, and below it is a red oval containing the word "NEW". At the very bottom of the screenshot, the Wykeham Farrance logo is visible with the text "Since 1941" and "PIONEERS IN ADVANCED SOIL TESTING".
